

DAIRY BUFFALO

The water buffalo (*Bubalus bubalis*) holds great promise and potential for animal production in the entire Indian subcontinent. Buffalo is the most important farm animal species in Asia, especially India, where it is extensively used for milk, meat as well as for draught power. It gains higher importance as buffaloes account for over 55% of the total milk production for India.

ABS Buffalo bulls have been selected through a rigorous selection protocol to suit your need for higher milk yield and high fat content. The hallmark of our buffalo stud is that all bull mothers have been recorded for the entire lactation twice a day. Production data is supported by data on fat %, further adding on to the reliability.

ABS buffalo bulls have been classified under the categories of [ROYALE](#), [ELITE](#), [PLATINUM](#) & [GOLD](#) as per the milk production and fat % of their respective dams.

ABS Murrah sires have the ability to meet every Murrah producers' criteria. [Click here](#) for sire details.
